Education

Western University Expected Jun 2027
BSc, Major in Computer Science *London, ON*

Experience

Software Engineer Intern Jan 2026 – present
TD Bank *Toronto, ON*

- Contributing to enterprise-scale backend services supporting pricing and product rate management, working within a large regulated financial technology environment.
- Developed and tested RESTful APIs using Node.js and Postman, validating authentication flows, request payloads, and response integrity across development environments.
- Gained hands-on experience with enterprise development practices, including version control, environment separation, and structured testing in a large codebase.
- Worked closely with senior engineers and product stakeholders to understand business requirements, system dependencies, and real-world production constraints.
- Collaborated in Agile workflows with daily stand-ups, sprint planning, and cross-team communication to track progress, surface blockers, and align on deliverables.

Full-Stack Software Engineer Jun 2025 – present
Savify *Toronto, ON*

- Built core features of a **React Native + Expo** mobile fintech app, **used by 500 users**, including bill splitting, Google **OAuth** for user identity and privacy, and multilingual support.
- Developed responsive UI flows and custom components, while integrating **Supabase and Firebase** services for authentication and real-time data storage.
- Implemented a structured feature rollout workflow with API documentation, testing plans, and staged deployments that improved release reliability and reduced post-release fixes.
- Worked in a **5-member Agile team** using GitHub for version control and iterative delivery of features.
- **Led daily standups** for the frontend group, clarified priorities, removed blockers, and **supported sprint planning** and review cycles.

Projects

PoCoTo - Virtual Pet Simulation Game [GitHub] | *Java, JavaFX, Gson, JUnit, GitLab*

- Collaborated on the full design and development of PoCoTo, a **Java-based virtual pet desktop game** built using JavaFX and MVC architecture.
- Implemented subclasses for player interactions, notification service, and save/load systems, **reducing code duplication by 20%** and improving modularity.
- Applied **design patterns** (Singleton, Observer, Factory Method) to **enhance maintainability and scalability** for future feature expansion.
- Managed code collaboration and documentation using **GitLab** and Agile methodologies.

NBA Game Predictor [GitHub] | *Python, Scikit-learn, Flask, React, Pandas, Vite, HTML/CSS*

- Built a **full-stack web app** predicting NBA game outcomes with **91.88% percent accuracy**.
- Engineered features such as rolling averages, opponent differentials, win streaks, and rest-day metrics.
- Created a **Flask API** for predictions and season simulations.
- Designed a **React + Vite** interface featuring sortable team selectors, prediction confidence values, and interactive stat visualizations.

Technical Skills

Languages: Python, Java, C++, C, SQL, JavaScript
Libraries/Frameworks: Flask, React, JavaFX, Scikit-learn, Pandas, Beautiful Soup, JUnit
Developer Tools: Git, Unix/Linux, GitHub, Jupyter Notebooks
